

MOTOAGORA REAR RACK FOR THE TRIUMPH TIGER 800/800 XC (1 1-) MOUNTING INSTRUCTIONS

1. Please mount the case adapter parts first, before mounting the rack. To install the rubber blocks, slide them partially through the opening holes and using pliers pull them (while twisting) from the bottom side.

PRECAUTION
Maximum load on rear rack: 8 Kg (17lbs) or the case manufacturer's weight limit, whichever is less.

2. Using the provided washers underneath the locking nuts, secure the GIVI sliding bolts.

3. Secure the Givi locking tip with the provided bolts. **Use thread locking compound (Loctite or equivalent) on these bolts.** The opening hole should be facing inwards.
4. Remove the 4 bolts holding the original rack under-cover. Leave the cover in place.
5. Install the rack using the provided bolts and spacers underneath the rack. Tighten the bolts simultaneously, not one at a time. Tightening torque: 10NM.

6. When mounting the case, first make sure the rear "slider" bolts are fully inserted, they should have no play. When pressing the case down, press the case release button to ease the locking mechanism. If the key is hard to turn in the locking position, make sure the release button is fully extended.
